Budding Machine Learning Engineer with knowledge of developing Machine Learning models. Have the ability to understand the business, solve problems and describe solutions by Storytelling. Good in Python, Machine Learning, Deep Learning and Statistics. Wish to explore this cutting-edge technology to help organizations develop new and integrate products Seeking a beginner role to enhance and explore my technical knowledge.

SKILLS

EDA	DEEP LEARNING	PREDICTIVE MODELLING	DATA ANALYSIS	CLASSIFICATION REGRESSION
NLP	NEURAL NETWORKS	DATA VISUALIZATION	PYTHON	
STATISTICS	HYPOTHESIS TESTING			

PROJECTS

Neural Machine Translation

Build a model for the purpose of translation of phrases and symbols from one language to the other using artificial neural network

Urban Sound Classification

Build a Neural network based model to classify various sounds using their unique spectrogram into classes such as Dog Barking, Sirens, Street Music etc

Distracted Driver Detection

Build a classification model to predict using a database of images whether a given driver is distracted, ie, texting, on a call, driving safely etc

Facial Emotion Recognition

Build an advanced model with the ability to predict the facial emotion of a person in an image

Text Generation

Build a Neural Network based model to predict what the next word will be in a sequence of words/sentences

Image Classification

Build a classifier for classifying 10,000 images into 10 classes (dog, horse, cat etc) using the CIFAR-10 Dataset

Image Caption Generation

Build a CNN/LSTM based model to provide a caption to the given image

Twitter Sentiment Analysis

Analyse the tweets posted on twitter to predict the sentiment of the tweet i.e. positive, negative or neutral

CERTIFICATIONS

Machine Learning Course
(Coding Ninjas)

EDUCATION

DMIETR - Datta Meghe Institute of Engineering, Technology & Research, Wardha

BE (Information Technology)
